****

Important Commands in Laravel Project 6.0 Create Admin Panel :

Laravel Projects commands using Her projects :

If I want search what is using command in cmd prompt :

How to search history of yours cmd prompts :

$ doskey /history

****

How to create Projects in Laravel :

composer global require laravel/installer

composer create-project laravel/laravel phramaLaravel

cd xampp

cd htdocs

cd phramaLaravel

npm install

npm install -g npm

****

Database Connections in (.env files in Laravel project)

setup database file :

DB_CONNECTION=mysql

DB_HOST=127.0.0.1

DB_PORT=3306

DB_DATABASE=database_name

DB_USERNAME=database_username

DB_PASSWORD=database_password

****

php artisan serve

composer require laravel/ui

php artisan serve

php artisan ui:auth

php artisan migrate

php artisan serve

php artisan make:migration create_admins_table

php artisan migrate

php artisan make:model Admin

php artisan make:middleware Admin

php artisan make:controller AdminController

php artisan make:controller Admin/AdminController

php artisan make:seeder AdminsTableSeeder

composer dump-autoload

php artisan db:seed

doskey /history

****

****

All Projects Command here (use in project)

Composer Install command :

 # composer global require laravel/installer

Project Create Command in laravel 6.0 in version of php 7.2 or less than :

 #   composer create-project laravel/laravel project-name

Or

 # composer create-project --prefer-dist laravel/laravel Project-name

Or

cmd#   Laravel new Project-name (If not working this command so use this command in your project only working with 7.3 or more vision in php).

Go to project directory :

 # cd project-name

After start server command :

 # php artisan serve

After start server You can open her project in localhost with port :

Project Url : http://127.0.0.1:8000

****

How To add All Project Based Steps :

Laravel Project Step How to create Project In Laravel 6.0

Uses Link :

https://auth0.com/blog/build-a-laravel-6-app-with-authentication/

1) Step 1 : how to install Composer before creating the Laravel project.

cmd command is user enter xampp htdocs dir :

cmd#   composer global require laravel/installer

2) Step 2 : Create New project (project name) Like : project1

cmd#   Laravel new Project-name (If not working this command so use this command in your project only working with 7.3 or more vision in php).

cmd#   composer create-project --prefer-dist laravel/laravel pharmaLaravel

**   or**

cmd#   composer create-project laravel/laravel project-name

**   or**

cmd#   composer create-project laravel/laravel="6.*" pharma-laravel

3)   cd pharma-laravel; or cd Project-name or cd pharmaLaravel

cmd#   php artisan serve   (server start in cmd command after start this you can open her project).

show project dir.

##

Project Url : http://127.0.0.1:8000

****

You need to install the frontend dependencies using the following command.

Install npm in laravel project :

 #   npm install

 #   npm install -g npm

Step 1: Configure the MySQL Database :

Create Database and setup in (.env file) in Laravel project (setup database file in Laravel project)

setup database file :

DB_CONNECTION=mysql

DB_HOST=127.0.0.1

DB_PORT=3306

DB_DATABASE=database_name

DB_USERNAME=database_username

DB_PASSWORD=database_password

you can able to generate the tables in the database using the following command.

After migrate table create automatically .

 # php artisan migrate

step 2: How to create View page in laravel project.

 # first create her assets file in public folder and after create new files in resource/views inside (folder is layout/commom.blade.php) files and create new file in views index.php file then both file # layout/common.blade.php file extends in the index page.

Ex :

layout/common.blade.php

header

<div id="main">

@yield('main')

</div>

footer

index.blade.php

@extends('userview.layout.common')

@section('main')

@section('title', 'Home')

<div class="main">

body part code

</div>

@endsection

create : route/web.php

Route::get('admin/', function () {

return view('admin/index');

});

note : set page where is created insert her location.

now load your view page in same url please visit it easy

url is : http://127.0.0.1:8000/admin

****

Step 4 : User want to create new login , register , password in user login in laravel :

#cmd :   composer require laravel/ui

created Successfully your user authentication in Laravel.

Create simple auth in Laravel Project .

#cmd : php artisan ui:auth

****

Que : How to create Multiple Auth in Laravel :

Guards for admin And Auth for users , authentication mutlti in laravel

Steps :

1) First create Admins table in Your Project .

#cmd :   php artisan make:migration create_admins_table

create_admin_migaration file using the help of users file ..

Ex :

```php
<?php

use Illuminate\Database\Migrations\Migration;

use Illuminate\Database\Schema\Blueprint;

use Illuminate\Support\Facades\Schema;

class CreateAdminsTable extends Migration

{

/**

        * Run the migrations.

        *

        * @return void

        */

public function up()

{

        Schema::create('admins', function (Blueprint $table) {

        $table->id();

        $table->string('name');

        $table->string('type');

        $table->string('mobile');
```

```php
        $table->string('email')->unique();

        $table->timestamp('email_verified_at')->nullable();

        $table->string('password');

        $table->string('image');

        $table->integer('status');

        $table->rememberToken();

        $table->timestamps();

    });

}

/**

    * Reverse the migrations.

    *

    * @return void

    */

public function down()

{

    Schema::dropIfExists('admins');

}

}
```

****

After Run Another Command :

#cmd : php artisan migrate

Your admins Tables created Successfully.

****

After Create Admin Model Using this Command in Laravel .

#cmd : php artisan make:model Admin

created your model Admin successfully.

App/Admin.php (In auth folder this is model file) :

Ex :

<?php

```php
namespace App;

use Illuminate\Notifications\Notifiable;

use Illuminate\Foundation\Auth\User as Authenticatable;

use Illuminate\Database\Eloquent\Model;

class Admin extends Authenticatable

{

// Admin Model data created fields

use Notifiable;

protected $guard ='admin';

protected $fillable =[

        'name','email','password',

],

protected $hidden = [

        'password','remember_token',

],

}
```

****

Doing some settings and Created Middleware and settings to change in laravel project :

Goto to config folder / auth.php file (do some changes in this files) :

Auth.php files :

'guards' => [

'web' => [

'driver' => 'session',

'provider' => 'users',

],

'admin' => [

'driver' => 'session',

'provider' => 'admins',

],

'api' => [

```php
        'driver' => 'token',

        'provider' => 'users',

        'hash' => false,

    ],

],

'providers' => [

    'users' => [

    'driver' => 'eloquent',

    'model' => App\User::class,

    ],

    'admins' => [

    'driver' => 'eloquent',

    'model' => App\Admin::class,

    ],

    // 'users' => [

    //      'driver' => 'database',

    //      'table' => 'users',
```

            //],

],

****

After Create middleware in Laravel project :

Using this commands :

#cmd : php artisan make:middleware Admin

===============================

Changes with (auth/kernel.php) : =

Ex :

protected $routeMiddleware = [

'admin' => \App\Http\Middleware\Admin::class,

],

================================

Create Controller files :

#cmd ==>   Using this command craeted Controller .

php artisan make:controller Admin/AdminController

created controller in Admin/AdminController.php files :

Code typing here :

Ex :

<?php

```php
namespace App\Http\Controllers\Admin;

use App\Http\Controllers\Controller;

use Illuminate\Http\Request;

class AdminController extends Controller

{

// All Admin Controller Functions Define here

public function dashboard()

{

        return view('admin.admin_dashboard');

}

public function login()

{

        return view('admin.admin_login');

}

}
```

****

Define routes : (routes/web.php file)

Ex :

// define all urls here :

<?php

use Illuminate\Support\Facades\Route;

/*

|--

| Web Routes

|--

|

| Here is where you can register web routes for your application. These

| routes are loaded by the RouteServiceProvider within a group which

| contains the "web" middleware group. Now create something great!

|

```
*/

/*

Route::get('admin/', function () {

return view('admin/index');

});

Route::get('admin/register', function () {

return view('admin/auth/register');

});

Route::get('admin/login', function () {

return view('admin/auth/login');

});

Route::get('/', function () {

return view('userview/index');

});

Route::get('welcome', function () {
```

```
    return view('welcome');

});

*/

Route::get('/', function () {

 return view('welcome');

});

Auth::routes();

Route::get('/home', 'HomeController@index')->name('home');

Route::prefix('/admin')->namespace('Admin')->group(function(){

    // All the Admin Routes will be defined here :-

    Route::match(['get','post'],'/','AdminController@login');

    Route::group(['middleware' => ['admin']],function(){

        Route::get('dashboard','AdminController@dashboard');

    });

});

**************************************************************
```

After Created new Code here :

Que : How to working is seeder In Admins Table data ?

#cmd : php artisan make:seeder AdminsTablesSeeder

Seeder created successfully.

****

database folder/AdminsTableSeeder.php files :

Ex : code here

****

```php
<?php

use Illuminate\Database\Seeder;
```

```php
class AdminsTableSeeder extends Seeder

{

/**

      * Run the database seeds.

      *

      * @return void

      */

public function run()

{

      // Date craeted && Inserted Data in Admin Tables Using this seeder

       DB::table('admins')->delete();

       $adminRecords =[

['id'=>1,'name'=>'admin','type'=>'admin','mobile'=>'7290944755','email'=>'admin@gmail.com','password'=>'','image'=>'','status'=>1],

       ];

       foreach ($adminRecords as $key => $record) {

              \App\Admin::create($record);
```

```
        }

}

}
```

****

Create Next code :

database/seeds/DatabaseSeeder.php files :

Code here

Ex :

<?php

use Illuminate\Database\Seeder;

class DatabaseSeeder extends Seeder

```php
{

/**

    * Seed the application's database.

    *

    * @return void

    */

public function run()

{

    // $this->call(UserSeeder::class);

    $this->call(AdminsTableSeeder::class);

}

}
```

****

Goto to models files :

Admin.php in models files changes code is :

Ex : Code Here :

```php
<?php

namespace App;

use Illuminate\Notifications\Notifiable;

use Illuminate\Foundation\Auth\User as Authenticatable;

use Illuminate\Database\Eloquent\Model;

class Admin extends Authenticatable
{
// Admin Model data created fields
use Notifiable;
protected $guard ='admin';
protected $fillable =[
        'name','type','mobile','email','password','image','status','created_at','updated_at',
];
protected $hidden = [
        'password','remember_token',
];
```

}

****

After run this commands data is instered in Your database table automatically using this commands :

This is command dump your files in your database table data .

#cmd : composer dump-autoload

After using second command here :

#cmd : php artisan db:seed

after use this commands return :

So intersted data successfully in yours admins tables.

###############################

You are running Composer with SSL/TLS protection disabled.

Generating optimized autoload files

> Illuminate\Foundation\ComposerScripts::postAutoloadDump

> @php artisan package:discover --ansi

Discovered Package: fruitcake/laravel-cors

Discovered Package: laravel/tinker

Discovered Package: laravel/ui

Discovered Package: nesbot/carbon

Discovered Package: nunomaduro/collision

Package manifest generated successfully.

Generated optimized autoload files containing 4426 classes

###################################

Returns in Cmd prompt :

Seeding: AdminsTableSeeder

Seeded: AdminsTableSeeder (0.07 seconds)

Database seeding completed successfully.

################################

Complete this yours data inserted in yours admins tables please check it.

Que : How to create admin password in Laravel :

how to create Hash password in Laravel :

Using Controller :

****

Admin/AdminController.php :

Code :

<?php

namespace App\Http\Controllers\Admin;

```php
use App\Http\Controllers\Controller;

use Illuminate\Http\Request;

use Hash;

class AdminController extends Controller

{

// All Admin Controller Functions Define here

public function dashboard()

{

        return view('admin.admin_dashboard');

}

public function login()

{

        //echo $password= Hash::make('12345678');die;

        return view('admin.admin_login');

}

}
```

****

After Update her Database/seeds/AdminTableSeeder.php :

Code changes :

Ex :

```php
<?php

use Illuminate\Database\Seeder;

class AdminsTableSeeder extends Seeder
{
/**
     * Run the database seeds.
     *
     * @return void
     */
public function run()
{
```

```
// Date craeted && Inserted Data in Admin Tables Using this seeder

 DB::table('admins')->delete();

 $adminRecords =[

['id'=>1,'name'=>'admin','type'=>'admin','mobile'=>'7290944755','email'=>'admin@gmail.c
om','password'=>'$2y$10$8z6zKNzRlSpsCtt3UBMofu71qmEGLdYUM2shP/.adUWSDx.cW
E9Nu','image'=>'','status'=>1],

 ];

 DB::table('admins')->insert($adminRecords);

 /*

 foreach ($adminRecords as $key => $record) {

     \App\Admin::create($record);

 }

 */

}

}

************************
```

Run The again command :

#cmd :   php artisan db:seed

Now recoard inserted successfully please check it in Laravel project.

Your login panel is working :

UserEmail : admin@gmail.com

Password :   12345678   (Hash Password is :
$2y$10$8z6zKNzRISpsCtt3UBMofu71qmEGLdYUM2shP/.adUWSDx.cWE9Nu)

Please check it is working or not.

#################################

How to add multiple Data in inserted Tables using seeds In laravel :

Code here in : database/seeds/AdminTableSeeder.php ==>

Ex :

```php
<?php

use Illuminate\Database\Seeder;

class AdminsTableSeeder extends Seeder
{
/**

    * Run the database seeds.

    *

    * @return void

    */

public function run()

{

        // Date craeted && Inserted Data in Admin Tables Using this seeder

         DB::table('admins')->delete();

         $adminRecords =[

['id'=>1,'name'=>'admin','type'=>'admin','mobile'=>'7290944755','email'=>'admin@gmail.c
```

```php
om','password'=>'$2y$10$8z6zKNzRlSpsCtt3UBMofu71qmEGLdYUM2shP/.adUWSDx.cWE9Nu','image'=>'','status'=>1],

['id'=>2,'name'=>'saurabh','type'=>'subadmin','mobile'=>'7290944755','email'=>'saurabh@gmail.com','password'=>'$2y$10$8z6zKNzRlSpsCtt3UBMofu71qmEGLdYUM2shP/.adUWSDx.cWE9Nu','image'=>'','status'=>1],

['id'=>3,'name'=>'abhi','type'=>'subadmin','mobile'=>'7290944755','email'=>'abhi@gmail.com','password'=>'$2y$10$8z6zKNzRlSpsCtt3UBMofu71qmEGLdYUM2shP/.adUWSDx.cWE9Nu','image'=>'','status'=>1],

        ];

    DB::table('admins')->insert($adminRecords);

    /*

    foreach ($adminRecords as $key => $record) {

        \App\Admin::create($record);

    }

    */

}

}

****************************
```

After using commands :

#cmd : php artisan db:seed

successfully inserted your data in database yours admins table.

Please check it.

####################################

****

Que : How to create Dashboard Page After Login User , and Logout Click so user send to login page ?

Solutions :

created AdminController in Admin folder :

Admin/AdminController.php file :

Code Here :

****

```php
<?php

namespace App\Http\Controllers\Admin;

use App\Http\Controllers\Controller;

use Illuminate\Http\Request;

use Session;

use Auth;

use Hash;

class AdminController extends Controller

{

// All Admin Controller Functions Define here

public function dashboard()

{

        return view('admin.admin_dashboard');

}
```

```php
public function login(Request $request)

{

    //echo $password= Hash::make('12345678');die;

    if($request->isMethod('post')){

        $data = $request->all();

        //echo "<pre>"; print_r($data);die();

if(Auth::guard('admin')->attempt(['email'=>$data['email'],'password'=>$data['password']]))
{

            return redirect('admin/dashboard');

        }else{

            Session::flash('error_message','Invalid Email Or Password');

            return redirect()->back();

        }

    }

    return view('admin.admin_login');

}

public function logout(){

    Auth::guard('admin')->logout();

    return redirect('/admin');
```

}

}

****

After Created :

view/admin/admin_login.blade.php files :

****

Que : How To create Change Password using Ajax in Laravel 6/7 Project :

Solutions :

****

create Some script and add this script in admin_layout.blade.php files :

view/layouts/admin_layout.blade.php files :

code here :

<body>

  bottom code:

   // Add this script in bottom in admin_layout.blade.php files.

   <!-- Custom Admin script file -->

<script src="{{url('js/admin_js/admin_script.js')}}"></script>

</body>

</html>

****

create script public/js/admin_js/admin_script.js   create file and code :

code here =>

_____

public/js/admin_js/admin_script.js

```
$(document).ready(function () {

    // Check Admin Password is Correct or not

    $("#current_pwd").keyup(function(){

        var current_pwd = $("#current_pwd").val();

        //alert(current_pwd);

        $.ajax({

            type:'post',

            url:'/admin/check-current-pwd',

            data:{current_pwd:current_pwd},

            success:function(resp){

                //alert(resp);

                if(resp=="false"){

                    $("#chkCurrentPwd").html("<font color=red> Current
Password Is Incorrect </font>");

                }else if(resp=="true"){

                    $("#chkCurrentPwd").html("<font color=green> Current
Password Is Correct </font>");

                }

            },error:function(){
```

```
                alert("Error");

          }

     });

   });

})
```

****

I want to skip the csrf token the same page url is paste here in :

middleware/VerifyCsrfToken.php file :

****

<?php

namespace App\Http\Middleware;

use Illuminate\Foundation\Http\Middleware\VerifyCsrfToken as Middleware;

```php
class VerifyCsrfToken extends Middleware

{

/**

    * The URIs that should be excluded from CSRF verification.

    *

    * @var array

    */

protected $except = [

    // using this we want csrf token is skip there (so add url here )

    "/admin/check-current-pwd"        // add this url I want skip csrf token in same url page.

];

}
```

****

Create Controller (Admin/AdminController.php)

Code Here :

```php
<?php
```

```php
namespace App\Http\Controllers\Admin;

use App\Http\Controllers\Controller;

use Illuminate\Http\Request;

use Session;

use Auth;

use App\Admin;

use Hash;

class AdminController extends Controller

{

// All Admin Controller Functions Define here

public function dashboard()

{

        return view('admin.admin_dashboard');

}

public function settings()

{
```

```php
//echo "<pre>";print_r(Auth::guard('admin')->user());die();

//Auth::guard('admin')->user()->id;

$adminDetails = Admin::where('email',Auth::guard('admin')->user()->email)->first();

return view('admin.admin_settings')->with(compact('adminDetails'));

}

public function login(Request $request)

{

    //echo $password= Hash::make('12345678');die;

    if($request->isMethod('post')){

        $data = $request->all();

        //echo "<pre>"; print_r($data);die();

    /*

Que : How to Update Admin Details && Images ==>

Images store command is :

#cmd : composer require intervention/image

****

Solutions :

Steps To updated Admin Details Using this step By step Code :

Route/web.php file code :

****

<?php

use Illuminate\Support\Facades\Route;

/*

|--

| Web Routes

|--

|

| Here is where you can register web routes for your application. These

| routes are loaded by the RouteServiceProvider within a group which

| contains the "web" middleware group. Now create something great!

|

*/

/*

Route::get('admin/', function () {

```
    return view('admin/index');

});

Route::get('admin/register', function () {

    return view('admin/auth/register');

});

Route::get('admin/login', function () {

    return view('admin/auth/login');

});

Route::get('/', function () {

    return view('userview/index');

});

Route::get('welcome', function () {

    return view('welcome');

});

*/
```

```php
Route::get('/', function () {

return view('welcome');

});

Auth::routes();

Route::get('/home', 'HomeController@index')->name('home');

Route::prefix('/admin')->namespace('Admin')->group(function(){

   // All the Admin Routes will be defined here :-

   //Route::match(['get','post'],'/','AdminController@login');

   //Route::get('dashboard','AdminController@dashboard');

   Route::match(['get','post'],'/','AdminController@login');

   Route::group(['middleware' => ['admin']],function(){

        Route::get('dashboard','AdminController@dashboard');

        Route::get('settings','AdminController@settings');

        Route::get('logout','AdminController@logout');

        Route::post('check-current-pwd','AdminController@check_current_pwd');

        Route::post('update-current-pwd','AdminController@update_current_pwd');

Route::match(['get','post'],'update-admin-details','AdminController@UpdateAdminDetails');
```

```
    });

});
```

****

Create Admin/AdminController.php file code :

****

```php
<?php

namespace App\Http\Controllers\Admin;

use App\Http\Controllers\Controller;

use Illuminate\Http\Request;

use Session;

use Auth;

use App\Admin;

use Hash;

use Image;
```

```php
class AdminController extends Controller

{

// All Admin Controller Functions Define here

public function dashboard()

{

        return view('admin.admin_dashboard');

}

public function settings()

{

        //echo "<pre>";print_r(Auth::guard('admin')->user());die();

        //Auth::guard('admin')->user()->id;

Now How to created Your models steps :

Step 3: Create the model and migration files :

Type the following command to create a model and migration files.

 # php artisan make:model Show -m

All Projects Command here (use in project)

Composer Install command :

 # composer global require laravel/installer

Project Create Command in laravel 6.0 in version of php 7.2 or less than :

 #   composer create-project laravel/laravel project-name

Or

 # composer create-project --prefer-dist laravel/laravel Project-name

Or

cmd#   Laravel new Project-name (If not working this command so use this command in your project only working with 7.3 or more vision in php).

Go to project directory :

 # cd project-name

After start server command :

 # php artisan serve

After start server You can open her project in localhost with port :

Project Url : http://127.0.0.1:8000

****

How To add All Project Based Steps :

How Can Create New Project In Laravel 6.0 (Full project Step by step) User Use all steps and commands :

****

All Projects Command here (use in project)

Composer Install command :

 # composer global require laravel/installer

Project Create Command in laravel 6.0 in version of php 7.2 or less than :

 #   composer create-project laravel/laravel project-name

Or

 # composer create-project --prefer-dist laravel/laravel Project-name

Or

cmd#   Laravel new Project-name (If not working this command so use this command in your project only working with 7.3 or more vision in php).

Go to project directory :

 # cd project-name

After start server command :

 # php artisan serve

After start server You can open her project in localhost with port :

Project Url : http://127.0.0.1:8000

****

How To add All Project Based Steps :

Laravel Project Step How to create Project In Laravel 6.0

Uses Link :

https://auth0.com/blog/build-a-laravel-6-app-with-authentication/

1) Step 1 : how to install Composer before creating the Laravel project.

cmd command is user enter xampp htdocs dir :

cmd#   composer global require laravel/installer

2) Step 2 : Create New project (project name) Like : project1

cmd#   Laravel new Project-name (If not working this command so use this command in your project only working with 7.3 or more vision in php).

cmd#   composer create-project --prefer-dist laravel/laravel pharmaLaravel

**   or**

cmd# composer create-project laravel/laravel project-name

   or

cmd# composer create-project laravel/laravel="6.*" pharma-laravel

3) cd pharma-laravel; or cd Project-name or cd pharmaLaravel

cmd# php artisan serve (server start in cmd command after start this you can open her project).

show project dir.

###

Project Url : http://127.0.0.1:8000

****

You need to install the frontend dependencies using the following command.

Install npm in laravel project :

 #   npm install

 #   npm install -g npm

Step 1: Configure the MySQL Database :

Create Database and setup in (.env file) in Laravel project (setup database file in Laravel project)

setup database file :

DB_CONNECTION=mysql

DB_HOST=127.0.0.1

DB_PORT=3306

DB_DATABASE=database_name

DB_USERNAME=database_username

DB_PASSWORD=database_password

you can able to generate the tables in the database using the following command.

After migrate table create automatically .

 # php artisan migrate

step 2: How to create View page in laravel project.

 # first create her assets file in public folder and after create new files in resource/views inside (folder is layout/commom.blade.php) files and create new file in views index.php file then both file # layout/common.blade.php file extends in the index page.

Ex :

layout/common.blade.php

header

      <div id="main">

      @yield('main')

      </div>

footer

index.blade.php

@extends('userview.layout.common')

@section('main')

```
@section('title', 'Home')

    <div class="main">

        body part code

    </div>

@endsection
```

create : route/web.php

```
Route::get('admin/', function () {

return view('admin/index');

});
```

note : set page where is created insert her location.

now load your view page in same url please visit it easy

url is : http://127.0.0.1:8000/admin

****

Step 4 : User want to create new login , register , password in user login in laravel :

#cmd :   composer require laravel/ui

created Successfully your user authentication in Laravel.

Create simple auth in Laravel Project .

#cmd : php artisan ui:auth

****

Que : How to create Multiple Auth in Laravel :

Guards for admin And Auth for users , authentication mutlti in laravel

Steps :

1) First create Admins table in Your Project .

#cmd :   php artisan make:migration create_admins_table

create_admin_migaration file using the help of users file ..

Ex :

```php
<?php

use Illuminate\Database\Migrations\Migration;

use Illuminate\Database\Schema\Blueprint;

use Illuminate\Support\Facades\Schema;

class CreateAdminsTable extends Migration

{

/**

        * Run the migrations.

        *

        * @return void

        */

public function up()

{

        Schema::create('admins', function (Blueprint $table) {

        $table->id();

        $table->string('name');
```

```php
            $table->string('type');

            $table->string('mobile');

            $table->string('email')->unique();

            $table->timestamp('email_verified_at')->nullable();

            $table->string('password');

            $table->string('image');

            $table->integer('status');

            $table->rememberToken();

            $table->timestamps();

        });
    }

    /**

        * Reverse the migrations.

        *

        * @return void

        */

    public function down()

    {

            Schema::dropIfExists('admins');

    }
```

}

****

After Run Another Command :

#cmd : php artisan migrate

Your admins Tables created Successfully.

****

After Create Admin Model Using this Command in Laravel .

#cmd : php artisan make:model Admin

created your model Admin successfully.

App/Admin.php (In auth folder this is model file) :

Ex :

```php
<?php

namespace App;

use Illuminate\Notifications\Notifiable;

use Illuminate\Foundation\Auth\User as Authenticatable;

use Illuminate\Database\Eloquent\Model;

class Admin extends Authenticatable
{
// Admin Model data created fields
use Notifiable;
protected $guard ='admin';
protected $fillable =[
        'name','email','password',
],
protected $hidden = [
        'password','remember_token',
],
```

}

****

Doing some settings and Created Middleware and settings to change in laravel project :

Goto to config folder / auth.php file (do some changes in this files) :

Auth.php files :

'guards' => [

'web' => [

'driver' => 'session',

'provider' => 'users',

],

'admin' => [

'driver' => 'session',

'provider' => 'admins',

],

```php
        'api' => [
            'driver' => 'token',
            'provider' => 'users',
            'hash' => false,
        ],
    ],

'providers' => [
        'users' => [
            'driver' => 'eloquent',
            'model' => App\User::class,
        ],

        'admins' => [
            'driver' => 'eloquent',
            'model' => App\Admin::class,
        ],

        // 'users' => [
```

```
//        'driver' => 'database',

//        'table' => 'users',

// ],

],
```

****

After Create middleware in Laravel project :

Using this commands :

#cmd : php artisan make:middleware Admin

===============================

Changes with (auth/kernel.php) : =

Ex :

protected $routeMiddleware = [

'admin' => \App\Http\Middleware\Admin::class,

],

================================

Create Controller files :

#cmd ==>   Using this command craeted Controller .

php artisan make:controller Admin/AdminController

created controller in Admin/AdminController.php files :

Code typing here :

Ex :

```php
<?php

namespace App\Http\Controllers\Admin;

use App\Http\Controllers\Controller;

use Illuminate\Http\Request;

class AdminController extends Controller
{
// All Admin Controller Functions Define here

public function dashboard()
{
        return view('admin.admin_dashboard');
}

public function login()
{
        return view('admin.admin_login');
}
}
```

****

Define routes : (routes/web.php file)

Ex :

// define all urls here :

<?php

use Illuminate\Support\Facades\Route;

/*

|--

| Web Routes

|--

|

| Here is where you can register web routes for your application. These

| routes are loaded by the RouteServiceProvider within a group which

```
| contains the "web" middleware group. Now create something great!

|

*/

/*

Route::get('admin/', function () {

 return view('admin/index');

});

Route::get('admin/register', function () {

 return view('admin/auth/register');

});

Route::get('admin/login', function () {

 return view('admin/auth/login');

});

Route::get('/', function () {

 return view('userview/index');

});
```

```
Route::get('welcome', function () {

 return view('welcome');

});

*/

Route::get('/', function () {

 return view('welcome');

});

Auth::routes();

Route::get('/home', 'HomeController@index')->name('home');

Route::prefix('/admin')->namespace('Admin')->group(function(){

   // All the Admin Routes will be defined here :-

   Route::match(['get','post'],'/','AdminController@login');

   Route::group(['middleware' => ['admin']],function(){

       Route::get('dashboard','AdminController@dashboard');

   });

});
```

****

After Created new Code here :

Que : How to working is seeder In Admins Table data ?

#cmd : php artisan make:seeder AdminsTablesSeeder

Seeder created successfully.

****

database folder/AdminsTableSeeder.php files :

Ex : code here

****

<?php

```php
use Illuminate\Database\Seeder;

class AdminsTableSeeder extends Seeder
{
/**

    * Run the database seeds.

    *

    * @return void

    */

public function run()

{

        // Date craeted && Inserted Data in Admin Tables Using this seeder

         DB::table('admins')->delete();

         $adminRecords =[

['id'=>1,'name'=>'admin','type'=>'admin','mobile'=>'7290944755','email'=>'admin@gmail.com','password'=>'','image'=>'','status'=>1],

        ];

         foreach ($adminRecords as $key => $record) {
```

```
            \App\Admin::create($record);

    }

}

}
```

****

Create Next code :

database/seeds/DatabaseSeeder.php files :

Code here

Ex :

<?php

use Illuminate\Database\Seeder;

```
class DatabaseSeeder extends Seeder

{

/**

        * Seed the application's database.

        *

        * @return void

        */

public function run()

{

        // $this->call(UserSeeder::class);

        $this->call(AdminsTableSeeder::class);

}

}
```

****

Goto to models files :

Admin.php in models files changes code is :

Ex : Code Here :

```php
<?php

namespace App;

use Illuminate\Notifications\Notifiable;

use Illuminate\Foundation\Auth\User as Authenticatable;

use Illuminate\Database\Eloquent\Model;

class Admin extends Authenticatable

{

// Admin Model data created fields

use Notifiable;

protected $guard ='admin';

protected $fillable =[

    'name','type','mobile','email','password','image','status','created_at','updated_at',

];

protected $hidden = [
```

```
        'password','remember_token',
    ];

}
```

****

After run this commands data is instered in Your database table automatically using this commands :

This is command dump your files in your database table data .

#cmd : composer dump-autoload

After using second command here :

#cmd : php artisan db:seed

after use this commands return :

So intersted data successfully in yours admins tables.

##################################

You are running Composer with SSL/TLS protection disabled.

Generating optimized autoload files

> Illuminate\Foundation\ComposerScripts::postAutoloadDump

> @php artisan package:discover --ansi

Discovered Package: facade/ignition

Discovered Package: fideloper/proxy

Discovered Package: fruitcake/laravel-cors

Discovered Package: laravel/tinker

Discovered Package: laravel/ui

Discovered Package: nesbot/carbon

Discovered Package: nunomaduro/collision

Package manifest generated successfully.

Generated optimized autoload files containing 4426 classes

##################################

Returns in Cmd prompt :

Seeding: AdminsTableSeeder

Seeded: AdminsTableSeeder (0.07 seconds)

Database seeding completed successfully.

###############################

Complete this yours data inserted in yours admins tables please check it.

Que : How to create admin password in Laravel :

how to create Hash password in Laravel :

Using Controller :

****

Admin/AdminController.php :

Code :

<?php

```php
namespace App\Http\Controllers\Admin;

use App\Http\Controllers\Controller;

use Illuminate\Http\Request;

use Hash;

class AdminController extends Controller
{
// All Admin Controller Functions Define here

public function dashboard()
{
        return view('admin.admin_dashboard');
}

public function login()
{
        //echo $password= Hash::make('12345678');die;
        return view('admin.admin_login');
}
```

}

****

After Update her Database/seeds/AdminTableSeeder.php :

Code changes :

Ex :

<?php

use Illuminate\Database\Seeder;

class AdminsTableSeeder extends Seeder

{

/**

    * Run the database seeds.

    *

    * @return void

    */

```php
public function run()

{

        // Date craeted && Inserted Data in Admin Tables Using this seeder

        DB::table('admins')->delete();

        $adminRecords =[

['id'=>1,'name'=>'admin','type'=>'admin','mobile'=>'7290944755','email'=>'admin@gmail.com','password'=>'$2y$10$8z6zKNzRlSpsCtt3UBMofu71qmEGLdYUM2shP/.adUWSDx.cWE9Nu','image'=>'','status'=>1],

        ];

        DB::table('admins')->insert($adminRecords);

        /*

        foreach ($adminRecords as $key => $record) {

            \App\Admin::create($record);

        }

        */

}

}
```

****

Run The again command :

#cmd   :   php artisan db:seed

Now recoard inserted successfully please check it in Laravel project.

Your login panel is working :

UserEmail : admin@gmail.com

**Password :   12345678   (Hash Password is :
$2y$10$8z6zKNzRlSpsCtt3UBMofu71qmEGLdYUM2shP/.adUWSDx.cWE9Nu)**

Please check it is working or not.

###################################

How to add multiple Data in inserted Tables using seeds In laravel :

Code here in : database/seeds/AdminTableSeeder.php ==>

Ex :

```php
<?php

use Illuminate\Database\Seeder;

class AdminsTableSeeder extends Seeder
{
/**
        * Run the database seeds.
        *
        * @return void
        */
public function run()
{
        // Date craeted && Inserted Data in Admin Tables Using this seeder

         DB::table('admins')->delete();
```

```php
    $adminRecords =[

['id'=>1,'name'=>'admin','type'=>'admin','mobile'=>'7290944755','email'=>'admin@gmail.com','password'=>'$2y$10$8z6zKNzRlSpsCtt3UBMofu71qmEGLdYUM2shP/.adUWSDx.cWE9Nu','image'=>'','status'=>1],

['id'=>2,'name'=>'saurabh','type'=>'subadmin','mobile'=>'7290944755','email'=>'saurabh@gmail.com','password'=>'$2y$10$8z6zKNzRlSpsCtt3UBMofu71qmEGLdYUM2shP/.adUWSDx.cWE9Nu','image'=>'','status'=>1],

['id'=>3,'name'=>'abhi','type'=>'subadmin','mobile'=>'7290944755','email'=>'abhi@gmail.com','password'=>'$2y$10$8z6zKNzRlSpsCtt3UBMofu71qmEGLdYUM2shP/.adUWSDx.cWE9Nu','image'=>'','status'=>1],
    ];

    DB::table('admins')->insert($adminRecords);

    /*
    foreach ($adminRecords as $key => $record) {
        \App\Admin::create($record);
    }
    */
}
}
```

****

After using commands :

#cmd : php artisan db:seed

successfully inserted your data in database yours admins table.

Please check it.

Que : #10 Make Advance E-com Website in Laravel 6 | Upgrade Laravel 6 to 7 | Upgrade E-com to Laravel 7.0

How to upgarde Laravel 6.0 to Laravel 7.0 .

Solutions :

Check laravel project version commands :

#cmd : php artisan --version

 # some changes with composer.json file in your project . with the help of (link : https://github.com/laravel/laravel)

changes composer.json file And (app/Exceptions/Handler.php) files .

After update Ui command in Larvel 6.0 to convert with Laravel 7.0

#cmd : composer require laravel/ui "^2.0"

#cmd : Composer update

#cmd : php artisan --version

@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@

****

Que : How To create Change Password using Ajax in Laravel 6/7 Project :

Solutions :

****

create Some script and add this script in admin_layout.blade.php files :

view/layouts/admin_layout.blade.php files :

code here :

<body>

** bottom code:**

** // Add this script in bottom in admin_layout.blade.php files.**

** <!-- Custom Admin script file -->**

<script src="{{url('js/admin_js/admin_script.js')}}"></script>

</body>

</html>

****

create script public/js/admin_js/admin_script.js   create file and code :

code here =>

_____

public/js/admin_js/admin_script.js

```
-----------------

$(document).ready(function () {

  // Check Admin Password is Correct or not

  $("#current_pwd").keyup(function(){

      var current_pwd = $("#current_pwd").val();

      //alert(current_pwd);

      $.ajax({

          type:'post',

          url:'/admin/check-current-pwd',

          data:{current_pwd:current_pwd},

          success:function(resp){

              //alert(resp);

              if(resp=="false"){

                  $("#chkCurrentPwd").html("<font color=red> Current
Password Is Incorrect </font>");

              }else if(resp=="true"){

                  $("#chkCurrentPwd").html("<font color=green> Current
Password Is Correct </font>");

              }
```

```
        },error:function(){

              alert("Error");

        }

    });

  });

})
```

****

I want to skip the csrf token the same page url is paste here in :

middleware/VerifyCsrfToken.php file :

****

```php
<?php

namespace App\Http\Middleware;

use Illuminate\Foundation\Http\Middleware\VerifyCsrfToken as Middleware;
```

```
class VerifyCsrfToken extends Middleware

{

/**

        * The URIs that should be excluded from CSRF verification.

        *

        * @var array

        */

protected $except = [

        // using this we want csrf token is skip there (so add url here )

        "/admin/check-current-pwd"        // add this url I want skip csrf token in same url
page.

];

}
```

****

Create Controller (Admin/AdminController.php)

Code Here :

```php
<?php

namespace App\Http\Controllers\Admin;

use App\Http\Controllers\Controller;

use Illuminate\Http\Request;

use Session;

use Auth;

use App\Admin;

use Hash;

class AdminController extends Controller

{

// All Admin Controller Functions Define here

public function dashboard()

{

        return view('admin.admin_dashboard');

}

public function settings()
```

```php
{
    //echo "<pre>";print_r(Auth::guard('admin')->user());die();

    //Auth::guard('admin')->user()->id;

    $adminDetails = Admin::where('email',Auth::guard('admin')->user()->email)->first();

    return view('admin.admin_settings')->with(compact('adminDetails'));

}

public function login(Request $request)
{
    //echo $password= Hash::make('12345678');die;

    if($request->isMethod('post')){

        $data = $request->all();

        //echo "<pre>"; print_r($data);die();

    /*
    //valiadate Error Message in Laravel

    $validateddata = $request->validate([

    'email' => 'required|email|max:255',

    'password' => 'required',

    ]);
```

```
*/

// How to create Custom message In Laravel

$rules = [

'email' => 'required|email|max:255',

'password' => 'required',

];

$customMessage = [

'email.required' => 'Email Address Must be Required',

'email.email' => 'Valid Email is required',

'password.required' => 'Password Must be Required',

];

$this->validate($request,$rules,$customMessage);

if(Auth::guard('admin')->attempt(['email'=>$data['email'],'password'=>$data['password']]))
{

                    return redirect('admin/dashboard');

        }else{
```

```php
                Session::flash('error_message','Invalid Email Or Password');

                return redirect()->back();

            }

        }

        return view('admin.admin_login');

    }

public function logout(){

        Auth::guard('admin')->logout();

        return redirect('/admin');

    }

public function check_current_pwd(Request $request)

{

        // check password code here

        $data = $request->all();

        //echo "<pre>";print_r($data);

        //echo "<pre>";print_r(Auth::guard('admin')->user()->password);

        if(Hash::check($data['current_pwd'],Auth::guard('admin')->user()->password)){

        echo "true";

        }else{
```

```php
        echo "false";

        }

}

public function update_current_pwd(Request $request){

    if($request->isMethod('post')){

    $data = $request->all();

    //echo "<pre>";print_r($data);die();

    //Check If Current Password is Correct

    if(Hash::check($data['current_pwd'],Auth::guard('admin')->user()->password)){

    //Check If New And Confirm Password is Matching

    if($data['new_pwd']==$data['confirm_pwd']){

Admin::where('id',Auth::guard('admin')->user()->id)->update(['password'=>bcrypt($data['new_pwd'])]);

            Session::flash('success_message','Password Updated Successfully !');

    }else{

            Session::flash('error_message','New Password And Confirm Password Is not Matched');

    }

    }else{
```

Session::flash('error_message','Your Current Password Is Incorrect');

}

return redirect()->back();

}

}

}

****

Update views/admin/admin_settings.blade.php files :

code here :

_____

@extends('layouts.admin_layout.admin_layout')

@section('content')

<!-- Content Wrapper. Contains page content -->

<div class="content-wrapper">

  <!-- Content Header (Page header) -->

```
<div class="content-header">

    <!-- /.content-wrapper -->

    @endsection
```

****

After the code Define the Route/web.php files :

```php
<?php

use Illuminate\Support\Facades\Route;

/*
|--------------------------------------------------------------------------
| Web Routes
|--------------------------------------------------------------------------
|
| Here is where you can register web routes for your application. These
| routes are loaded by the RouteServiceProvider within a group which
| contains the "web" middleware group. Now create something great!
|
*/

/*
Route::get('admin/', function () {
return view('admin/index');
});

Route::get('admin/register', function () {
```

```
    return view('admin/auth/register');

});

Route::get('admin/login', function () {

return view('admin/auth/login');

});

Route::get('/', function () {

return view('userview/index');

});

Route::get('welcome', function () {

return view('welcome');

});

*/

Route::get('/', function () {

return view('welcome');

});
```

```
Auth::routes();

Route::get('/home', 'HomeController@index')->name('home');

Route::prefix('/admin')->namespace('Admin')->group(function(){

   // All the Admin Routes will be defined here :-

   //Route::match(['get','post'],'/','AdminController@login');

   //Route::get('dashboard','AdminController@dashboard');

   Route::match(['get','post'],'/','AdminController@login');

   Route::group(['middleware' => ['admin']],function(){

       Route::get('dashboard','AdminController@dashboard');

       Route::get('settings','AdminController@settings');

       Route::get('logout','AdminController@logout');

       Route::post('check-current-pwd','AdminController@check_current_pwd');

       Route::post('update-current-pwd','AdminController@update_current_pwd');

   });

});

************************
```

After All code Check your Change Password is working fine .

****

****

Now How to created Your models steps :

Step 3: Create the model and migration files :

Type the following command to create a model and migration files.

 # php artisan make:model Show -m
